## Abstract of JP2000155638

**PROBLEM TO BE SOLVED:** To provide a portable information processor which can speedily, securely and clearly display multiple contents through the use of the picture of a small size. **SOLUTION:** In a list-type information processor 1, a content C is divided into plural groups and private group display pictures are allocated to the respective groups. A primary selection function part 21 sequentially switches the pictures to LCD 3 and they are displayed. When any group display picture is selected, the content selection function 21 of a selection system 20 switches the content display picture where the contents C contained in the group are collectively displayed in a screen unit to LCD 3 and displays them.
